Regarding claims 19-23, the prior art fails to disclose or make obvious a device comprising, in addition to the other recited limitations of the claim, "a polarization controller, wherein the feedback control is adapted to determine whether an adjustable polarization element that is being adjusted operator near a limit of an operating voltage range, and to adjust the control voltage of the adjustable polarization element to be away from the limit while adjusting other adjustable polarization elements; to maximize or minimize the feedback signal until the adjustable polarization element is operated within a range that is away from an upper limit and an lower limit of the operating voltage range without resetting any of the adjustable polarization elements in the
